Important Announcement

The publication of the Journal of Research Institute for Catalysis, Hokkaido University will be terminated with the last issue of vol. 32 (1984). The contributors are therefore requested to submit manuscripts not later than September 30, 1984.

The Journal was founded in 1948 by the late Professor Juro Horiuti as the Editor-in-Chief. In those days, owing to various difficulties immediately after the World War II, all journals published by Japanese scientific societies were in poor condition, and a host of international journals as we have them today did not exist. Thus the Journal was an important channel through which the results of researches at our Institute were sent to the world-wide scientific community. In 1950s, contributions to the Journal from outside our Institute, domestic and overseas, started to come in, and we were very much pleased that the Journal was able to provide a place for exchanging scientific opinions.

Meanwhile, the situation of the Japanese scientific community was rapidly improving, economically or otherwise. The journals published by Japanese scientific societies gradually attained high academic standard and broad coverage. It is also to be noted that a considerable number of international journals have been founded since the late 1950s. They include the Journal of Catalysis, Applied Catalysis, Catalysis Reviews, Journal of Molecular Catalysis, International Journal of Chemical Kinetics, Surface Science, Applications of Surface Science, Electrochimica Acta, and Journal of Electroanalytical Chemistry; these journals deal with major research subjects of our Institute.

In view of these changes that have taken place over the past 25 years, and in view of several difficulties which include the problem of growing publication cost, we, the editors of the Journal, have found that it is becoming increasingly more difficult and inadequate for a research institute with limited budget and personnel to publish a scientific journal *in the usual sense*. Thus we have arrived at the above conclusion.

The publication of a new periodical from the Institute to replace the present Journal is being planned. This periodical is likely to have the character of an annual report of the Institute. The details will be announced at a later date.

We take this opportunity to thank the readers and especially the contributors for their interest in the Journal, and hope that their interest in publications from our Institute will continue.

Takashi Nakamura
Director and Editor-in-Chief
The Research Institute for Catalysis
Hokkaido University
