RECORDING THE NATIVE PSOCOPTERA OF BRITAIN AND IRELAND - AN INTRODUCTION TO KEITH ALEXANDER -

Keith Alexander (UK)

My interest in Psocoptera began in 1979 when I noticed an *Ectopsocus briggsi* (or was it *E. petersi*?) in my sweep net when I was out recording invertebrates for my employer The National Trust in Devon. I had not knowingly seen a Psocid before and had to start from scratch with a key to insect groups! I think it was Michael Chinery's Collins Guide to the Insects of Britain and Northern Europe that got me started and then I acquired a copy of the Royal Entomological Society's Handbook (New, T. R., 1974, Psocoptera. *Handbk. Id. Br. Insects* I (7)). From then on I took what has to be described as a fairly casual interest, keeping specimens rather selectively, more on whim than anything else - I was employed to identify the nature conservation interests of National Trust properties at the time and Psocoptera are too little known to contribute much - if anything.

Living in Gloucestershire, with its active field recording tradition maintained by the Gloucestershire Naturalists' Society, I was eventually invited to act as County Recorder for Psocoptera, from about 1990. There must be very few English counties with their own official Psocoptera Recorder! There was no county list at the time although an earlier entomologist - Bob George - had started compiling records, mainly of warehouse adventives, in the 1950s and 1960s. His dusty old Psocoptera file was ceremonially passed to me from the Society's archives one day.

The Gloucestershire county list currently stands at 49 species, comprising 36 natives and 13 introductions. Additions may be expected in both categories, the true total of natives being probably around 40 out of the 50 plus nationally, while the potential for further introductions is enormous. My review of the county fauna is due to be published in The Gloucestershire Naturalist very soon.

My recent expansion in interest in Psocids really came about in 1998 while working in Norfolk. My Gloucestershire activities had begun to awaken a deeper interest and my work had taken me to Norfolk that year and I had decided to try recording more intensely. And, amazingly, while browsing through local publications in the English Nature office in Norwich I came across Phil Wither's review of the Norfolk fauna in *Trans. Norfolk Norwich Nat. Soc.* 1997 - someone else actively interested in recording Psocoptera in Britain! This was a real boost - a framework was beginning to form, although Phil was based in France at that time.

And then Bob Saville's review of "The Barklice of the Lothians (Scotland)" appeared in *Glasgow Naturalist* in 1999 - although I didn't come across it for some time afterwards - and I realised I was really not alone! I had just submitted some notes on Psocoptera from one of the National Trust's estates in Northumberland to *Entomologist's Record*, which appeared in 2001, and so I sent a reprint to Bob as an introduction. Bob has since drawn my attention to *Psocid News* ... and here we are.

In fact I am now in touch with a small number of other entomologists around Britain who are interested in Psocoptera. None of us had been terribly active and so we had not realised that we shared this common interest. It was really Bob Saville's work that has stimulated us to start communicating together.

My interests are very much in ecology and biogeography, and I have started thinking about the degree of association that our native Psocids have with ecological continuity. Many of the arboreal species appear to be more associated with ancient woodlands and ancient wood pastures, and this would presumably link to the well-known high species-richness of the epiphyte communities of these habitats - better developed epiphytic vegetation will provide a greater variety of niches for associated invertebrates.

Peter Skidmore had suggested that *Trichadenotecnum majus* is an ancient woodland species some time ago. My work in Gloucestershire has started to lead to similar conclusions. Britain's largest bark fly *Psococerastis gibbosa*, the cloudy-winged *Metopophorus nebulosus* and the picture-winged *Loensia fasciata* have only been found in the Cotswold ancient woodlands and in the medieval Forest of Dean, whereas *Caecilius fuscopterus*, with its distinctive wing-banding, the small delicate *Enderleinella obsoleta* and other picture-winged species *Loensia variegata* and *T.*

majus have only been found in the Forest. *Trichadenotecnum sexpunctatum* has only been found in one of the larger ancient woodlands in the Cotswold Hills. So there is a clear pattern locally that woodlands with a longer history have a uniquely species-rich Psocid fauna.

My Northumberland recording had shown similar associations with the older woods for *P. gibbosa* and *M. nebulosus*, although *Loensia* and *Trichadenotecnum* were present in areas with less obvious habitat continuity. I have also been recording Psocids more actively in Cornwall, at the opposite, south-western extreme of England. Here I know *Caecilius fuscopterus*, *P. gibbosa*, *Trichadenotecnum sexpunctatum* and *Loensia fasciata* only from ancient oak woods, but *M. nebulosus* is more widespread, even occurring amongst scrub below seacliffs. It seems likely that the degree of association with ancient woodland will be found to vary across the local ranges of the individual species.

Incidentally, I do hate the term "lice" for these attractive insects. I have started to refer to the arboreal species as "bark flies", as the term "lice" has such a bad name with people. If we wish to promote an interest in these delightful insects for their own sake then we do need an attractive vernacular name.

RESEARCH PROGRAM

Heather Clarke (University of Wales, UK)

My name is Heather Clarke, and I am a BSc student at the University of Wales in the U.K.. This summer I have been collecting local species of Psocoptera, and now I am going to use PCR to see if they contain types of bacteria that have been linked to parthenogenesis in arthropods. I will be looking for the bacteria in bisexual and thelytokous species of Psocoptera.

I would be very grateful for any samples to extend my search, and can be contacted at bsu87a@bangor.ac.uk.

ADDITIONS AND CORRECTIONS (PART 1) TO LIENHARD & SMITHERS, 2002: "PSOCOPTERA (INSECTA) – WORLD CATALOGUE AND BIBLIOGRAPHY"

Charles Lienhard (Geneva Natural History Museum, Switzerland)

1. Introduction

I plan to publish in "Psocid News" a series of "Additions and Corrections to the World Catalogue and Bibliography". Please remember to send me copies of your papers on Psocoptera, and indicate to me all the errors you find in the 2002-book (=Lienhard & Smithers, 2002). If papers which came to your notice are not treated in the "Additions", please send me the bibliographical references by e-mail. In the "Additions to the Bibliography", references to the papers which I have not yet seen are marked with "(Not seen)". Please send me a copy of these papers if you feel concerned. Only papers which I have seen are analysed for the "Additions to the Catalogue", except those "(Not seen)"-papers where the matter they deal with is clearly indicated in the title or in the abstract (e. g. most of Wang Jinjun's papers). The other papers will be analysed in a future part of the "Additions to the Catalogue", as soon as a copy of them becomes available to me.

In general these "Additions" present the information in the style of the 2002-book, according to the criteria mentioned there (pp. ix-xli) and using the same abbreviations (cf. pp. xl-xli). Families (and higher categories, if mentioned) are listed according to Table 1 of the 2002-book. For each family, changes concerning supra-generic taxa are mentioned at the beginning of the family treatment, except for Psocidae, where subfamilies and tribes are treated separately. For genus-group names and species-group names already mentioned in the 2002-book only the author is cited, for new names the complete reference (author, year, page) is given in their first entry, where new genus-group names are marked with two asterisks (**) and new species group names with one asterisk (*). Genera are listed alphabetically within each family, except for Psocidae, where they are grouped according to subfamilies and tribes. Species are listed alphabetically within each genus. Country names (in the "Additions to the Catalogue") and author names (in the "Additions to the Bibliography") are not printed in small capitals, as in the 2002-book, but in normal letters. The "Corrections" refer to the pages of the 2002-book and the changes proposed here are underlined if necessary for intelligibility.

No nomenclatural act will be published in the "Additions to the Catalogue" because articles in "Psocid News" are not considered as published works under the rules of ICZN. Sometimes recommendations to future revisers are given concerning nomenclatural acts which eventually should be published. Only some mandatory changes are made in the "Additions to the Catalogue" (e. g. spelling of species name endings in genera *Neoblaste*, *Ptycta*, *Trichadenotecnum*).

An up-to-date cumulative page index for genus names and family names mentioned in the "Additions and Corrections" will be compiled about every two years, making it relatively easy to work with the different parts up to the moment where a comprehensive complement to the 2002-book could be published.

2. Additions to the Catalogue

NOTE: The important and very voluminous monograph on Chinese psocids published by Li Fasheng (2002) is mentioned in chapter 3 ("Additions to the Bibliography"), but it has not yet been analysed in detail for this part of the "Additions to the Catalogue". In this book all 1505 Chinese species examined by Li Fasheng are keyed, described and illustrated; 918 of them are new to science and 64 new genera are defined. This monograph will be analysed in the forthcoming parts of the "Additions to the Catalogue", in the present part only the most important changes concerning higher classification proposed by Li Fasheng are mentioned (see heading "New classification" for Trogiomorpha, Troctomorpha and Psocomorpha).

Psocoptera

Anat.: Emeljanov *et al.*, 2001a (evolution of testes), 2001b (evolution of testes and ovaries). Palaeont.: Janzen, 2002 (Baltic Amber).

Trogiomorpha

New classification: Li Fasheng, 2002: 4 (Table 1). The suborder is subdivided into the following superfamilies and families (some names are misspelled in Table 1, their correct spelling is given here): Thylacelloidea: Thylacellidae. Perientomoidea: Lepidopsocidae, Perientomidae. Trogioidea: Anomocopeidae, Trogiidae. Psoquilloidea: Psoquillidae, Empheriidae. Prionoglaridoidea: Prionoglarididae. Speleketoroidea: Speleketoridae. Psyllipsocoidea: Psyllipsocidae, Psocathropidae.

Empheriidae

Family definition (p. 576), key to species (p. 582): Baz & Ortuño, 2001b.

*Empheropsocus*** Baz & Ortuño, 2001b: 577. Gender: M. Type species: *Empheropsocus arilloi* Baz & Ortuño.

*Empheropsocus arilloi** Baz & Ortuño, 2001b: 577. Amber (Cretaceous): Spain (I).

*Empheropsocus marginelabrus** Baz & Ortuño, 2001b: 578. Amber (Cretaceous): Spain (I).

*Preempheria*** Baz & Ortuño, 2001b: 580. Gender: F. Type species: *Preempheria antiqua* Baz & Ortuño.

*Preempheria antiqua** Baz & Ortuño, 2001b: 581. Amber (Cretaceous). Spain (I).

Psocomorpha

New classification: Li Fasheng, 2002: 5-6 (Table 1). The suborder is subdivided into the following superfamilies and families: Epipsocoidea: Dolabellopsocidae, Epipsocidae, Callistopteridae, Asiopsocidae. Ptiloneuroidea: Cladiopsocidae, Ptiloneuridae. Calopsocoidea: Polypsocidae (misspelled Polypsocidea in Table 1), Calopsocidae. Caeciliusoidea: Caeciliusidae, Stenopsocidae, Amphipsocidae, Dasydemellidae. Hemipsocoidea: Hemipsocidae. Pseudocaecilioidea: Ectopsocidae, Elipsocidae, Philotarsidae, Archipsocidae, Pseudocaeciliidae, Trichopsocidae, Bryopsocidae. Psocoidea: Peripsocidae, Mesopsocidae, Psilopsocidae, Myopsocidae, Psocidae, Lachesillidae.

New classification: Yoshizawa, 2002e: 372 (Table 1). The suborder is subdivided into the following infraorders, superfamilies and families, the phylogeny of which is extensively discussed: Archipsocetae: Archipsocidae. Hemipsocetae: Hemipsocidae. Psocetae: Myopsocidae, Psilopsocidae, Psocidae. Homilopsocidea: Elipsocoidea: Elipsocidae; Lachesilloidea: Ectopsocidae, Lachesillidae; Pseudocaecilioidea: Trichopsocidae, Pseudocaeciliidae, Calopsocidae; Peripsocoidea: Bryopsocidae, Peripsocidae, Philotarsidae, Mesopsocidae. Epipsocetae: Cladiopsocidae, Ptiloneuridae, Dolabellopsocidae, Epipsocidae. Caeciliusetae: Asiopsocoidea: Asiopsocidae; Caeciliusoidea: Stenopsocidae, Amphipsocidae, Caeciliusidae.

3. Additions to the Bibliography

Remarks:

Each number of "Psocid News" is separately quoted under Yoshizawa (ed.). Selected references to some particularly interesting contributions published in these newsletters can also be found under the authors' names (e. g. Mockford, 2002b; Yoshizawa, 2002d).

Cross-references to all authors are made as in the 2002-bibliography, cross-references to editors however are only made for the first editor in cases where there are more than one editor (e. g. Banks, H. J. *et al.* 1998; Sidik, M. *et al.* 1997).

Corrections for some "Non-Japanese" species:

Caecilius similis (p. 136), *Stenopsocus makii* (p. 202): Delete Japan and place the reference Tsutsumi, 1965 under Taiwan.

Taeniosigma ingens (p. 215), *Clematostigma hyalinum* (p. 428), *Clematostigma subcostale* (p. 429), *Lophopterygella camelina* (p. 479): These species are mentioned for Japan based on Tomita & Haga, 1991 (A checklist of Psocoptera from Japan). According to Yoshizawa (pers. comm. and Internet-Checklist of Japanese Psocoptera, <http://insect3.agr.hokudai.ac.jp/psoco-web/psoc.html>, update 1 Oct. 2002) they have not been recorded from present-day Japan. A critical analysis of the literature sources which are at the basis of this confusion will be made in a future paper on the Japanese fauna by Yoshizawa himself.

Trichadenotecnum medium (p. 467): Delete Japan, where the species has not been recorded. Yoshizawa (1996d: photograph) illustrates the Japanese species *T. pseudomedium* Yoshizawa, 2001 (see above: "Additions to the Catalogue") using erroneously the name *T. medium*.

Delete the reference "Anonymous 1989", it is replaced by the above mentioned reference "Morimoto, 1989" (cf. correction on p. xxx and "Additions to the Bibliography").
