a

b

Online Resource 4 **a-b** Expression patterns of plant Suf homologues. **a** The mRNA levels for SufD, SufC and SufB were extracted from the Nottingham Arabidopsis Stock Centre's microarray database (<http://affymetrix.arabidopsis.info/>). The mRNA levels measured after the onset of leaf senescence (35 days after germination) were divided by those measured before the onset of leaf senescence (17 days after germination). **b** Immunoblot analysis of AtNAP1 levels in WT. Leaf AtNAP1 was detected with an anti-AtNAP1 antibody as described in Materials and Methods. A protein extract equivalent to 0.2 mg fresh leaf weight was loaded per lane.
