(A) General comments
IR spectra were recorded using a JASCO FT/IR-5300 or FT/IR-410 spectrometer. $^1$H NMR (400 MHz) and $^{13}$C NMR (100 MHz) spectra were recorded on a JEOL JNM-A400II or ECX-400P FT NMR. Chemical shifts, $\delta$ are referred to TMS. EI and ESI high-resolution mass spectra were measured on a JEOL JMS-700TZ or JMS-T100LP spectrometer. Optical rotation was measured by a JASCO DIP-360 or P-2200. Melting points are measured by Yanagimoto micro melting point apparatus and are uncorrected. HPLC was carried out using a JASCO PU-2089 Plus intelligent pump and a UV-2075 Plus UV detector.
