Hokkaido University Collection of Scholarly and Academic Papers: HUSCAP
Adverbial Clauses in Koryak: Degrees of Subordination and the Five Levels

Megumi KUREBITO
University of Toyama

1. Introduction
The present paper aims to describe adverbial subordination in Koryak\(^1\). In concrete terms, it first presents Koryak morphosyntactically typical adverbial subordinate clauses and clarifies their semantic and morphosyntactic idiosyncrasies. It next presents marginal adverbial clauses which lie to differing degrees between subordination and coordination. It then takes up those typical and marginal adverbial subordinate clauses, with a special focus on causal, conditional and concessive, in terms of the ‘Five Levels’ proposed by Mie Tsunoda (2004)\(^2\) and examines if there is a correlation between different degrees of subordination and the Five Levels.

Other subordinate clauses, that is, relative and complement clauses, lie outside the scope of the present discussion.

2. The subordination-coordination continuum
To begin with, let us determine the scope of the clauses under discussion.

In Koryak, and perhaps in other languages as well, drawing a clear dividing line between subordination and coordination is not necessarily a straightforward matter. There is, rather, a continuum running from typical subordination to typical coordination. I tentatively divide the continuum into four degrees according to level of subordination, that is, DEGREE 1, 2, 3, and 4. The continuum is schematized in FIGURE 1 below.

\(^1\) Koryak is a member of the Chukchi-Kamchatkan language family as are the languages of the neighboring Chukchi, Kerek, Alutor, and Itelmen peoples. It is characterized by marked dialectal diversity: besides the main dialects, Chawchavan and Palana, the presence of other dialects such as Paren, Itkan, Kamenskoe, Apuka, and Karaga, has been reported (Zhukova 1968). All the examples presented in this paper are from the Chawchavan dialect. The Koryak (Chawchavan) phonemic inventory set up by Kurebito (2004) is as follows: Consonants: \(p, t, t', k, q, v, y, \dagger, c, m, n, n', \eta, l, l', j, w\); Vowels: \(i, e, a, o, u, \alpha\). Voicing is not contrastive and all the stops are voiceless. The symbol ‘\(\dagger\)’ denotes palatalization of the dentals. \(c\) is used as a symbol of the affricate \([t\dagger]\). Pitch and stress are not distinctive.

\(^2\) The data for the present paper are mainly from my fieldwork conducted in September of 2010 and 2011 in Khabarovsk, Russia. The fieldwork was supported by Grants-in-Aid for Scientific Research from the Japanese Ministry of Education, Science, Sports and Culture for the project ‘Endangered Languages of Northeast Asia: Documentation and Typology’ headed by Toshiro Tsumagari (#22320075) and for the project ‘Descriptive and Typological Study on the Structure of Predicative Adjective in Koryak’ headed by the author of the present paper (#22520394). Some complementary data are also cited from Ajatginina & Kurebito (eds.)(2006).
3. Adverbial clause types

3.1. Non-finite verb in subordinate clauses

The most typical adverbial subordinate clauses exhibit Degree 1 or Degree 2 behavior. In both degrees, non-finite verbs are employed for the formation of subordinate clauses.

Traditional Koryak grammar has treated non-finite verb forms occurring in subordinate clause as ‘deепричастие (converbs)’ (Zhukova 1972:265). However, in its strict sense Koryak has no converb, as there is no special converb marker exclusive to the verb. Most explicitly and typically linked subordinate clauses in Koryak employ various case marking affixes, the locative, the instrumental, the dative, the allative, the comitative, and the associative, which are the same affixes as those employed in the nominal system (See Table 1). They attach to two different kinds of syntactic structures. That is, they either attach directly to the verb stem (Type A), the more dominate of the two, or to a kind of nominalized verb stem (Type B) (See the following sections for the examples of each type).

(1) Type A: VERB STEM – CASE AFFIX
Type B: VERB STEM – RELATIONAL AFFIX – CASE AFFIX

Although a language which exhibits similar two-type adverbial subordination has not yet been found in Northeastern Asia, the Kham language belonging to the Tibetan-Burma language family, also employs precisely the same strategies for adverbial subordination (Watters 2011:101).
We seem to be able to make the following generalization about correlation between the case markers and other morphosyntactic phenomena in typical subordinate clauses:

(a) It seems that in Type A there is a hierarchy of case marking according to what semantic areas they cover: Locative>Instrumental>Dative, Comitative, Associative.
(b) This hierarchy probably correlates with the following morphosyntactic phenomena.
   (b1) Co-occurrence of other subordinative clause linking devices: the more semantic areas a case marker covers, the more clause linking devices such as conjunctions are employed (see section 3 for further discussion).
   (b2) Embedment: the subordinate clause may either precede or follow the main clause; however, the former is the dominate structure. Also, some subordinate clauses, seemingly those lower in this hierarchy, that is, the dative, the comitative, and the associative, seem to be more easily embedded in the main clause.

3.2. Degree 1
In Degree 1 the subordinate clause C1 with a non-finite verb is embedded in the main clause C2. The case markers employed in Degree 1 are, as mentioned above (b2), the dative, the comitative, and the associative, which show Type A behavior and occupy the lower level of the hierarchy. At the same time, an example of Type B Degree 1 has not yet been found in my field data. In the examples below [the subordinate clause] is shown in this way, with the main clause being left unmarked. Non-finite verb attached by CLM in each subordinate clause is underlined.

---

4 The division of semantic areas is based on Thompson, Longacre, and Hwang (2007). According to Thompson, Longacre, and Hwang (2007) the adverbial clauses which have been reported for languages around the world fall into twelve basic semantic areas: Time/Locative/Manner/Purpose and Reason/Circumstantial/Simultaneous/Conditional/Concessive/Substitutive/Additive/Absolutive/Speech act. As I have not yet been able to obtain data for Circumstantial, Substitutive, Additive, Absolutive and Speech act, I did not include them in the table.

5 To be more precise, -ma is the latter part of the comitative circumfix ya-...ma.
2. -ŋ (Dative) ‘while’

\[\text{ŋan} \quad [\text{vella-ŋ}] \text{sc} \quad \text{ko-neec} \text{ŋan-ŋəvo-ŋ-ne-n}].\]

he/she(ERG) stand-DAT IPF-watch-HAB-IPF-3SGS-3SGO

‘Standing, he/she was watching it/him/her.’

3. -ma (Comitative) ‘while’

\[\text{ŋəŋ} \quad \text{gelvə-li-ŋ-kine-w} \quad [\text{ŋankə tanŋən-ŋa}] \text{sc} \quad \text{all} \quad \text{reindeer.herd-E-REL-ABS.PL} \quad \text{there} \quad \text{go.to.war-COM} \quad \text{pəhwənt-o} \quad \text{to} \quad \text{ŋəŋ} \quad \text{na-ko-nnej-ŋəvo-ŋ-na-w} \quad \text{money-ABS.PL} \quad \text{and} \quad \text{many} \quad \text{INV-IPF-send-HAB-IPF-3SGS-3PL.O} \quad \text{tanŋəket-ŋ-ne-ŋətəŋ}.\]

go.to.war-E-place-ALL

‘While the war was going on there, all the reindeer herders sent a lot of money to the front.’

4. yejəŋ-/yajŋə- -e/-ə/-te/-ta (Associative) ‘while’

\[\text{Pəxiqə-w} \quad [\text{yejəŋ-ə-jajŋ-te}] \text{sc} \quad \text{yala-la-jØ om-nota-jtəŋ}.\]

bird-ABS.PL ASC-E-sing-ASC pass-PL-PF-3S warm-earth-ALL

‘Birds flew toward the warm land, singing.’

3.3. DEGREE 2

At the same time, subordinate clauses with case marking from a higher level of the hierarchy, that is, the locative or the instrumental of Type A, seem to be more autonomous. This is DEGREE 2. The case markers of Type A and the allative of Type B do not influence the syntax of the subordinate clause, even if the non-finite verb with case marking no longer inflects for person, number, and case. The non-finite verb takes the arguments and adjuncts freely just as an ordinary finite verb does. The subject of an intransitive and the object of a transitive verb take the absolutive case, while the subject of a transitive takes the ergative case. Examples (5), (6), (7), (8), (9), (10), and (11) below are examples of Type A.

5. -k (Locative) ‘when’

\[[\text{Ifka-jtəŋ} \quad \text{jelqəvə-ŋ-k}, \quad \text{qej} \quad n-əppul’u-qina-w; \quad \text{qej} \quad \text{quce-w} \quad \text{they-ALL} \quad \text{drop.by-E-LOC even} \quad \text{PRP-little-3-ABS.PL even} \quad \text{other-ABS.PL} \quad \text{meki-w}] \text{sc}, \quad \text{na-k-ew-ŋəvo-ŋ-na-w;} \quad \text{q-ə-yala-la-tək}, \quad \text{who-ABS.PL INV-IPF-say-HAB-IPF-3SGS-3PL.O} \quad \text{2SGS/IMPR-E-pass-PL-2SGS} \quad \text{ənki} \quad \text{q-ə-caj-o-la-tək}, \quad \text{q-ojecval-la-tək.} \quad \text{here} \quad \text{2SGS/IMPR-E-tea-drink-PL-2SGS} \quad \text{2SGS/IMPR-play-PL-2SGS} \quad \text{‘When the lads used to stop by, they’d say, “Come in for some tea and fun!’’’}

474
(6) -k (Locative) ‘after’
\[\text{Jajt-ə-k}\text{, kəta ya-qlev-o-ŋvo-ta}^6.\]
\text{return.home-E-LOC only.then COM-bread-eat-HAB-COM}
‘Eat bread only after you return home.’

(7) -k (Locative) ‘because’
\[\text{Caqali-t-ə-k unmək kojŋ-ə-n}\text{sc, ləyən sugar-VBL-E-LOC very.much cup-E-ABS.SG even}\]
\text{n-ə-waŋna-γen-Ø nəyɛl-i-Ø. PRP-E-sticky-3TOP-SG become-PF-3SGS}
‘Because (someone) put a lot of sugar in the cup, it became sticky.’

(8) -k (Locative) ‘if’
\[\text{Muqe-juj-ə-k}\text{sc, ənno jaja-k va-jo-lqəl-Ø’ rain-ICH-E-LOC he/she(ABS.SG) house-LOC stay-NML-to.be-3SGS}\]
‘If it starts raining, he/she should stay home.’

(9) -k (Locative) ‘even if’
\[\text{Miŋki jej-u ekmit-ə-k}\text{sc, ewəncam ne-je-jyulet-yi. where what-ABS.PL take-E-LOC anyway INV-FUT-recognize-2SGO}\]
‘Wherever and whatever you take, they will recognize you.’

(10) -e/-a/-te/-ta (Instrumental) ‘because’
\[\text{Am-potəxqa-tya}\text{ta yə̑mkə-jeŋ Kamak-Ø}\text{sc, only-get.angry-INSTR I-ALL Kamak-ABS.SG}\]
\text{ujje e-winn’et-ke t-ə-ku-nɔt-ə-ŋ-ə-n not not-help-not 1SGS-E-IPF-do-E-IPF-3SGO}
‘Because Kamak got angry with me, I don’t help him.’

(11) -e/-a/-te/-ta (Instrumental) ‘while’
\[\text{Yə̑mnənn t-ə-cvi-tku-ne-w-Ø} [\text{yə̑cci em-joqət-e}]\text{sc. I(ERG) 1SGS-E-cut-ITR-3SGS-3PL.O-PF you(ABS.SG) only-sleep-INSTR}\]
\text{I cut them while you slept.’}

At the same time, -kena-jeŋ of Type B also belongs to Degree 2 as in (12) below.

^6 It should be noted that although FV formed is expected here in the main clause, ya-qlev-o-ŋvo-ta is NFV form with the comitative marker ya-...-ta which denotes imperative meaning when attached to a verbal stem.

^7 -jo-lqə is a nominalizer whose general meaning as an argument is ‘one who is supposed to’, but it denotes deontic meaning when used as a predicate as seen in this example.
(12) -kena-jtø (Relational + Allative) ‘before’
river-ABS.SG freeze-E-REL-ALL 1PL.S-IPF-fish-HAB-PL-IPF
‘We usually fish before the river freezes.’

-kena-jtø ‘before’, Type B, consists of the relational -kena and the allative -jtø. The first suffix -kena, which has traditionally been regarded as a ‘otnositel’nye prilagatel’nye (relational adjectives) forming suffix (Zhukova 1972), attaches to nominal, adverbial, and verbal stems and denotes the various relations between the head noun and the dependent. It behaves more like a nominal in that it agrees with the head noun in number and case.

(13a) umk-ø-kin-Ø yijnik-Ø
forest-E-REL-ABS.SG wild.animal-ABS.SG
‘a wild animal in the forest’
(13b) ənkɔjep-kine-t l’ɔmŋɔl’-te

be-E-PART-ABS.PL fish-ABS.PL
‘There are many varieties of fish in the Paren’ river.’
(13e) ɔɔmmo t-ɔ-lgɔn ø-k-Ø Cajbuqa-kina-jtø wajam-etŋø.
l(ABS) 1SGS-E-go-1SGS-PF Chajbuxa-REL-ALL river-ALL
‘I went to the Chajbuxa river.’

Furthermore, the adverbial clauses in DEGREE2 take not only the case marker as CLM but also a free subordinative CLM in C1 and a coordinative CLM in C2. Subordinative CLMs are shown in Table 2 below.

<table>

</tbody>
</table>

Meanwhile, the free coordinative CLMs employed in C2 are $Tam$ ‘but’, $to$ ‘and’, and $em'yu$ (=qun), $qinam$, $qinwat$ ‘so, therefore’ and others.

As has already been pointed out above, there seems to be a correlation between the hierarchy of case markers depending on what semantic areas they cover and the use of other subordinative CLMs. That is, the more semantic areas a case marker can cover, the more free CLMs it needs. Conversely, the less semantic areas a case marker covers, the less free CLMs it needs (See Figure 2).

Locative $-k$ may be accompanied by the most free CLMs, that is, $tite$ ‘when’, $vitku$ ‘after’, $majew$ ‘because’ in causal, $ekilu$ ‘if’ in conditional, and $qej$ (ŋano) ‘although’.

**Correlation between case marker hierarchy and other CLMs**

Locative $-k$ may be accompanied by the most free CLMs, that is, $tite$ ‘when’, $vitku$ ‘after’, $majew$ ‘because’ in causal, $ekilu$ ‘if’ in conditional, and $qej$ (ŋano) ‘although’ in concessive.

COM-try-HAB-COM  

‘Even if you can’t, try hard!’

3.4. **Degree 3**

Contrary to the typical adverbal subordinate clauses of **Degree 1** and **Degree 2**, both of which make use of non-finite verbs marked with case affixes, **Degree 3** is a marginal type of subordinate clause. The structure can be schematized as **C1:** FreeCLM+FV,  

**C2:** (FreeCLM)+FV. Instead of a non-finite verb, a finite verb occurs in C1. Both C1 and C2 can take free CLMs. C1 takes the free subordinative CLMs as shown in **Table 2** above. Meanwhile free coordinative CLMs such as *\u\m* ‘but’, *to* ‘and’, and *em\h\u (=q\u\n)\(^10\)*, *qinam*, *qinwat* ‘so, therefore’ are employed in C2.

(19) *tite* ‘when’

\[Tite \ y\m\m\a\ O t\-\a\-j\e\t\-\a\-k\-\O \ y\a\l\v\a\h[=\h\a\p\h\g]\sc,

(22) **kitkit** ‘as soon as’

\[
\begin{align*}
[\text{Kitkit} & \quad \text{k-ŋal-at-ŋ-Ø}]_{\text{sc}}, \quad \text{na-ŋvo-ŋ-naw} \\
\text{as.soon.as} & \quad \text{IPF-E-snow-VBL-E-IPF INV-IPF-begin-IPF-3PL.O} \\
\text{jiwl-ŋ-k} & \quad \text{picŋ-u} \quad \text{mŋu-te.} \\
\text{carry-E-INF} & \quad \text{food-ABS.PL} \quad \text{caravan-INST} \\
\text{‘As soon as it snowed, they began to carry food in a caravan.’}
\end{align*}
\]

‘Before’ and ‘until’ clauses are different from other temporal clauses such as ‘when’ clauses in that the event named in one clause has not yet happened by the time of the event in the other clause. Koryak has three CLMs for ‘before’ clauses and deals with this semantic fact in different ways. That is, **tite=ŋən** in (23) is equivalent to ‘before’. Therefore the subordinate clause occurs in affirmative form. On the other hand, **jeppə** ‘yet’ in (24) and **kəna=van** ‘as long as’ in (25) introduce a negative form to the subordinate clause.

(23) **tite=ŋən** ‘before’

\[
\begin{align*}
\text{he/she(ABS) come-PF-3SGS club-ABL before I(ABS)} \\
\text{He came from the club before I went out of the house.’}
\end{align*}
\]

(24) **jeppə** ‘before’

\[

‘Although rain came through, it is dry in the forest.’

81
3.5. **DEGREE 4**

In DEGREE 4, the two linking clauses C1 and C2 are the most autonomous. Both of the clauses make use of finite verbs inflected for person, number, and TAM. Only free CLMs such as lam ‘but’, to ‘and’, and emɪu (=qun), qinam, qinwat ‘so, therefore’, always occurring in the postpositional clause, link the two clauses. Therefore we may tentatively regard DEGREE 4 as coordinative.

4. **Five Levels**

We have so far organized Koryak adverbial clauses based on the semantic and morphosyntactic features as premises for the discussion in this section. The results reveal that it is not easy to draw a dividing line between adverbial subordination and coordination in Koryak because subordination and coordination form gradual continuum but that they can be roughly divided into four types according to the degree of
integration.

In this section Koryak adverbial subordinate clauses, typically causal, conditional and concessive clauses are examined in terms of the five-level distinction proposed by Mie Tsunoda (2004). Mie Tsunoda (2004) proposed a five-level distinction in clause linkage, incorporating Nakau’s (1986, 1994) three ‘ryooiki’ (domains), Sweetser’s (1990) three domains, and three of Crevels’ (2000) four levels. The characterizations of the five levels are as follows.

(40) Five-level distinction in clause linkage (Mie Tsunoda 2004)

<table>

<td></td>
</tr>
</tbody>
</table>

Mie Tsunoda (2004) argues that in Japanese clause linkage markers vary according to modality in the main clause or semantic relation between subordinate clause and main clause. In connection with this argument Mie Tsunoda (2004) also points out that the more autonomous the subordinate clause is, the more Levels it can cover. If it applies to Koryak adverbial subordinate clause, Degree 1 and Degree 2 formed by non-finite verbs should cover less Levels than Degree 3 formed by finite verb (Degree 4 is outside the scope of this discussion because it is not subordination but coordination). This is what we will clarify in this section.

In analyzing the examples of non-finite and finite verb, we focus on the locative marker -k, as it is the most multifunctional and can express not only causal, but also conditional and concessive relation. Subordinate free CLMs such as Causal majew, conditional ekulu, and concessive qej (=yano) and the coordinative markers such as emtu=qun, emtu ‘so’ and am ‘but’ are not examined separately in this section, as -k often co-occurs with these free CLMs and it is not necessarily easy to judge whether the existence or non-existence of these free CLMs interacts with the Five Level or not. All the English examples below from [2-1-1-1] to [2-3-5-2] are cited from Tasaku Tsunoda (2011).

---

11 For the interview I prepared a Russian translation of Tasaku Tsunoda’s “Questionnaire for Five Levels” (2011).
4.1. Causal

Both non-finite and finite verb in causal subordinate clauses can express Level I, Level II, Level III, and in some cases Level IV.

To express causal relations Koryak mainly employs CLMs such as the locative suffix -$k$ and the free word $m\text{\textregistered}ew$ ‘because’. The order of the main and subordinate clauses is not fixed. The subordinate clause may precede or follow the main clause. However, it seems that there is a restriction in the occurrence of $m\text{\textregistered}ew$ or -$k$. When the subordinate clause precedes the main clause, $m\text{\textregistered}ew$ is not obligatory. In this case either a finite verb or non-finite verb may occur. The coordinative marker $em\text{\textregistered}u=qun$ or $em\text{\textregistered}u$ may also occur at the beginning of the main clause. At the same time, when the subordinate clause follows the main clause, $m\text{\textregistered}ew$ is obligatory. In this case, only a finite verb can occur in the subordinate clause.

4.1.1. Level I

[2-1-1-1] Because the rain fell, the ground is wet.

(41a) [(\textregistered}ew) $aj\text{\textregistered}ve$ $unm\text{\textregistered}k$ $muqet-i-\text{\textregistered}$ ($\text{\textregistered}qet-\text{\textregistered}k$

[2-1-3-2] Give the child food because he/she is hungry.

(46a) [(Maжев) kaмин-о-n yεvev-i-Ø]sc, emju=qun because child-E-ABS.SG get.hungry-PF-3SGS so=INT
4.1.4. Level IV

[2-1-4-1] Because the ground is wet, rain fell.

*Not permissible.

[2-1-4-2] Because he is alive, I GUESS/SUPPOSE/INFER/CONCLUDE THAT the doctor saved him.

*Not permissible.

However, other examples of Level IV are permissible if occurring with an adverb such as ćwemcam ‘surely, anyway’ and amu ‘probably’.

(47) Ēwemcam ćnkej ĕman y-iñçmelq-ē-lin-Ø,
surely long.ago he/she(ERG) RES-boil-RES-3SGO
[mjew qinam ye-qxvi-lin-Ø cajpat]-sc.
because so RES-get.cold-RES-3SGS kettle-ABS.SG ‘Because the kettle got cold, he surely boiled it long ago.’

(48) Āmu muqet-i-Ø, [mjew kimitla-w
probably rain-PF-3SGS because clothes-ABS.PL
ye-l’ēfo-lena-w]-sc.
RES-get.wet-RES-3PL.S
‘Because the clothes got wet, the rain probably fell.’

4.1.5. Level V

[2-1-5-1] There is food here, because you are looking for food.

Intended meaning: BECAUSE you are looking for food, I SAY TO YOU ‘There is food here.’

*Not permissible.

[2-1-5-2] There is water here, because you are/look thirsty.

Intended meaning: BECAUSE you are/look thirsty, I SAY TO YOU ‘There is water here.’
4.2. Conditional

For conditional subordinate clauses Koryak employs the free word CLMs such as *ekilu ‘if’, *geveq ‘if’, *tite ‘when’ and converb CLMs *-k, the same suffix as in the causal.

*Tite ‘when’ is used when cause-and-effect relationship between the main clause and the subordinate clause is logically clear as in [2-2-1-1]. The difference between *ekilu ‘if’ and *geveq ‘if’ is not clear at present. They are in most cases interchangeable or even sometimes co-occurring.

4.2.1. Level I

[2-2-1-1] If spring comes, flowers bloom.

For this example, *ekilu meaning ‘if’ is not used, because it stands to reason that spring comes and flowers blossom. Therefore, in this example *tite meaning ‘when’ is used instead. The subordinate clause may either precede or follow the main clause.

(49a) [Tite *ko-γvo-η-Ø ano-joSa-η-κ (~ano-joSa-η-κ)]sc,
when IPF-begin-IPF-3SGS spring-ICH-E-INF spring-ICH-E-LOC

IPF-begin-PL-IPF-3S grow-INF plant-ABS.PL

(49b) Ko-γvo-la-η-Ø tɔŋe-k tɔŋecS-η-u,
IPF-begin-PL-IPF-3S grow-INF plant-ABS.PL
[tite ko-γvo-η-Ø ano-joSa-η-κ]sc
when IPF-begin-IPF-3S grow-ICH-INF

[2-2-1-2] If rain falls, I always stay home.

(50) [Ekilu ku-muqet-ο-η-Ø (muqet-ο-κ)]sc, γənnə mo qonpəŋ
If IPF-rain-E-IPF-3SGS rain-E-LOC I(ABS) always
jaja-k το-ko-tva-γvo-η.
house-LOC 1SGS-E-IPF-stay-HAB-IPF

4.2.2. Level II

[2-2-2-1] If rain falls tomorrow, he has to stay in the house.

(51) [Ekilu mittiw je-muqet-ο-η-Ø (~muqet-ο-κ)]sc,
if tomorrow FUT-rain-ICH-E-FUT-3SGS rain-ICH-E-LOC
to ənno jaja-k va-jo-lgəl-Ø.
and he/she(ABS) house-LOC stay-NML-to.be-3SGS
If the child is/becomes hungry, he/she will surely cry.

4.2.3. Level III

[2.2.3.1] Don’t go out if rain falls.

4.2.4. Level IV

[2.2.4.1] If the ground is wet, rain fell.

*Not permissible.

[2.2.4.2] If the child is crying, he/she is hungry.

This sentence is permissible if occurring with an adverb such as amu ‘probably’ and ano ‘probably’.

4.2.5. Level V

[2.2.5.1] There is an umbrella, if rain is falling.

Level V is not permissible if the subordinate clause indicates the present tense, while it is permissible if it indicates the future tenses as in the following (56).
[56] [Ekilu je-muqe-ju¬-η-Ø (je-muqe-ju¬-η-k)]sc, ηnu wutku
if FUT-rain-ICH-E-FUT-3SGS FUT-begin-ICH-E-LOC here
škaf-ciko ko-tva-η-ơ zontik-Ø.
shelf-inside IPF-be-IPF-3SGS umbrella-ABS.SG
‘There is an umbrella here, if it rains.’

[2.2.5.2] There is food here, if you are hungry.

*Not permissible.

4.3. Concessive
Koryak employs the free CLM qej(tjano) ‘even if, although’ for concessive subordinate clause. The locative case marker –k may also occur in concessive clause.

4.3.1. Level I
[2.3.1.1] Although rain fell, the ground is dry.

(57) [Qej (=tjano) moqa-yala-j-Ø (~moqa-yala -k)]sc, ewɔncam
even.if in.spite.of rain-pass-PF-3SGS rain-pass-LOC anyway

As I have been unable to find CLMs for each of the target constructions, I could not show the difference of Levels between different CLMs in the same semantic area. However, we seem to be able to draw a rough dividing line between the causal/conditional and the concessive in that the formers can cover Level IV (or in some cases Level V in causal), while the latter can cover only Level 1, 2, and 3.

5. Conclusion

The aforementioned analysis reveals the following:
i) It is not easy to draw a clear dividing line between subordination and coordination in Koryak because clause linkage markers in coordination occur even in a typical subordinate clause. We should rather consider subordination and coordination to lie at two ends of a continuum. This continuum can be divided into two morphological types, that is, the non-finite verb type and the finite verb type. These are further divided into roughly four subtypes according to the degree of subordination.

ii) As for the Five Levels, we seem to be able to draw a rough dividing line between causal/conditional and concessive. Causal and conditional subordinate clauses cover levels I, II, III, and IV (and in some cases V also), while concessive subordinate clauses cover levels I, II, and III.

iii) Distinction between non-finite and finite verb types, in other words, degree of subordination, does not seem to interact with the Five Levels.

[Acknowledgement]
I am deeply grateful to my language consultant, Mrs. Ajatginina Tatjana Nikolaevna (born in 1955), who generously and patiently gave her time to answer my questions and share her rich knowledge of Koryak with me. I am also very grateful to Dr. Mie Tsunoda for motivating me to write the present paper with her deep insight and stimulating arguments regarding the problems of Japanese clause linking. I also owe the birth of the present paper to Dr. Tasaku Tsunoda, the project leader of ‘Adnominal Clauses and Noun-Concluding Construction: Grammaticalization of Nouns’ at the National Institute of Japanese language and Linguistics, who provided me with the invaluable opportunity to exchange cross-linguistic information on the Five Levels and to make a presentation on Koryak clause linking at his corporative meeting held on 10th, December, 2011.

コリャーク語の副詞節
従属の度合いと五段階

呉人 恵
富山大学

本稿では、コリャーク語の副詞節の形態統語的・意味的特徴を、主に 1) 従属の度合い、2) 主節のモダリティおよび従属節と主節の連接が表わす意味関係によって設定された「五段
階」（角田三枝 2004）の2つの観点から考察し、次の点を指摘した。

(a) コリャーク語の典型的な副詞節は、非定形動詞として現われるが、これには本来、名詞語幹に格接辞に由来する節連接マーカーが動詞語幹に直接付加されるタイプと、「関係接辞」と呼ばれる接辞を介して間接的に動詞語幹に付加されるタイプがある。前者のタイプには、場所格、道具格、与格、共同格、随格が用いられるが、表わし得る意味領域の範囲が場所格＞道具格＞与格、共同格、随格の順で階層をなす。また、後者のタイプには方向格が用いられる。

(b) 典型的な副詞節以外にも、定形動詞や接続詞を用いた周辺的な節の連接も見られる。このような事情も関わって、コリャーク語では従属節と等位節を区別することは必ずしも容易ではなく、むしろ連続体を成していると考えられる。この連続体は、主節への従属の度合いによって、従属節から等位節へと大体に4段階に分類される。

(c) 「五段階」から見ると、コリャーク語の副詞節は、原因/条件と逆接の間に線を引くことができそうである。すなわち、前者はレベルⅠ、Ⅱ、Ⅲ、Ⅳ（場合によってはⅤ）をカバーできる一方で、逆接はレベルⅠ、Ⅱ、Ⅲしかカバーできない。

(d) 日本語では従属節の従属の度合いと「五段階」が相関する可能性が指摘されているが（角田三枝 2004）、コリャーク語では非定形動詞か定形動詞かという従属の度合いの違いと「五段階」の間の相関性は現段階では観察されていない。ただし、限られたデータによる観察であるため、今後のさらなる調査が必要である。
