## One-pot synthesis of PCL-b-PVL.

$\varepsilon-\mathrm{CL}(0.570 \mathrm{~mL}, 5.00 \mathrm{mmol}), \operatorname{PPA}(27.2 \mu \mathrm{~L}, 200 \mu \mathrm{~mol})$ and DPP $(2.50 \mathrm{mg}, 10.0 \mu \mathrm{~mol})$ were placed in a reaction vessel, which was sealed under an argon atmosphere. The reaction mixture was stirred at $80^{\circ} \mathrm{C}$ in an oil bath. After 90 min , we obtained a portion of the reaction mixture for SEC measurement and ${ }^{1} \mathrm{H}$ NMR measurement, then $\delta$ - $\mathrm{VL}(0.453 \mathrm{~mL}, 5.00 \mathrm{mmol})$ was added to the reaction mixture. The polymerization was quenched by adding Amberlyst ${ }^{\circledR}$ A21. The reaction mixture was purified by reprecipitation from $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ solution into cold methanol $/ n$-hexane $(\mathrm{v} / \mathrm{v}=9 / 1)$ to give the $\mathrm{PCL}-b$-PVL $(812 \mathrm{mg})$ as a white solid.
