2. Vessel Personnel

Crew:	Captain:	Associate Professor	Shogo Takagi
			And 28 persons

Research Staff:

Associate Professor (Laboratory of Marine Biodiversity, Hokkaido University)	Atsushi Yamaguchi
Teaching Assistant:	4 persons
Undergraduate Students:	49 persons

3. Items of Research

Hydrographic observations: (Observation of Temperature, Salinity, and Computed Dynamic Depth Anomaly)

Hydrographic work on deck and the data processing were made by the Science officer, the deck officers, crews, research staff and cadets of the "Oshoro maru". Temperature and salinity were measured by CTD (Seabird SBE-9Plus) and XCTD.

Drift Gillnet Research

Three gillnet researches were performed during this cruise.

The captain supervised the operations, and were conducted by deck officers, crews, research staff.

One set of drift gillnet was used to collect salmonids and other epipelagic fishes in Figs.2 Details about each operation are shown in Table 3. The gillnet configuration is as follows:

Drift Gillnet Sampling

One set of drift gillnet was used to collect salmonids and other epipelagic fishes [Figs.1 and Table 1.]

Details about each operation are shown in Table 2. The gillnet configuration is as follows:

Stations	net	A-Gear		C-gear										Total
	Mesh size (mm)	112	115	48	55	63	72	82	93	106	121	138	157	
OSG1401	Number of tan	6	6	3	3	3	5	6	5	3	3	3	3	49

The net comprised of total 49 tans of C-Gear gillnet (non-selective varied research mesh, Takagi, 1975), and A-Gear gillnet (commercial mesh). Each tan was 50m long. Gillnet gear was set in the evening, allowed to soak overnight, and retrieved in the following morning. The number of organisms caught was counted by species for mesh size. Catch per unit effort (CPUE) values were calculated as the number of fish caught by C-gear gillnet per tan.

Salmon Hook-and-Line and surface longline Research:

To collect salmons, hook-and-line gears and surface longline were used in Cruise #269. These samplings were mainly conducted with observations when ship was under drifting.
