## DYNAMICAL YANG-BAXTER MAPS

YOUICHI SHIBUKAWA

ABSTRACT. In this work, we propose and investigate dynamical Yang-Baxter maps, some of which produce solutions to the (quantum) dynamical Yang-Baxter equation. Suppose that  $L$  is a loop and a group. If their unit elements coincide, then  $L$  gives birth to a bijective dynamical Yang-Baxter map from  $L \times L$  to  $L \times L$  whose dynamical parameter belongs to  $L$ . The above group  $L$  is abelian if and only if the corresponding dynamical Yang-Baxter map satisfies the unitary condition.
