## Corrigendum

# Corrigendum to “Simulation studies to assess the long-term effects of Japan’s change from trivalent to quadrivalent influenza vaccination” [Vaccine 36 (2018) 624–630]

Shinya Tsuzuki <sup>a,\*</sup>, Markus Schwehm <sup>b</sup>, Martin Eichner <sup>c,d</sup><sup>a</sup> Department of Hygiene, Graduate School of Medicine, Hokkaido University, Sapporo 060-8638, Japan<sup>b</sup> ExploSYS GmbH, Leinfelden, Germany<sup>c</sup> Department for Clinical Epidemiology and Applied Biometry, University of Tübingen, Tübingen, Germany<sup>d</sup> Epimos GmbH, Dußlingen, Germany

The authors regret that they reported two incorrect values in their paper. In the Abstract and in section 3.2, they claimed that in Japan’s population of 125.35 million, annually 91.51 YOLs are gained by QIV and 10.75 million USD are saved, but these values should be 915.06 YOLs and 107.52 million USD, respectively.

These extrapolated values for the total Japanese population were only used as illustration; they neither affected other results nor the discussion or conclusion. The authors would like to apologise for any inconvenience caused.
