4. Data on Temperature, Salinity, and Computed Dynamic Depth Anomaly

Hydrographic work on deck and the data processing were made by the deck officers, crews, research staff and cadets of the “Oshoro Maru”.

Temperature and salinity were measured by CTD (Seabird SBE9Plus and SBE-19).

Dynamic computations were made using a desk-top computer aboard the “Oshoro Maru”.

5. Data on vertical long-line research

Three operations using a vertical long-line were performed. The gear was comprised of a main line, a weight which attached to end of the main line, a buoy which attached to another end of the main line, and six branch lines (18m-for tuna and 4 m-for squid) which attached to the main line. Seven types of main lines (220, 270, 400, 500, 600, 700 and 800 m) were used for the research. These operations were supervised by the captain, and were conducted by deck officers, crews, cadets, and research staff.

Group		A	B	C	D	E	F	E

Three branch line(for tuna)	(m)	18	18	18	18	18	18	18
