Crystallography

Colorless single crystal of Yb₉ and Lu₉ clusters obtained from solutions in methanol were mounted on a glass fiber by using epoxy resin glue. All measurements were made using a Rigaku RAXIS RAPID imaging plate area detector with graphite-monochromated MoK α radiation. Corrections for decay and Lorentz-polarization effects were made using a spherical absorption correction, solved by direct methods, and expanded using Fourier techniques. Non-hydrogen atoms were refined anisotropically except for disordered atoms. Hydrogen atoms were refined using the riding model. The final cycle of full-matrix least-squares refinement was based on observed reflections and variable parameters. All calculations were performed using a CrystalStructure crystallographic software package. We confirmed the CIF data by using the checkCIF/PLATON service. CCDC-1578015 (Yb₉ cluster) and CCDC-1578016 (Lu₉ cluster) contains the crystallographic data for this paper. These data can be obtained free of charge from The Cambridge Crystallographic Data Center via www.ccdc.cam.ac.uk/data_request/cif.

Crystal Structure of Lu₉ Cluster

a)

b)

Fig. S1 ORTEP image of a) Yb₉ and b) Lu₉ clusters (thermal ellipsoids at 50% probability). Orange: Yb atoms, yellow: Lu atoms, red: oxygen atoms, and grey: carbon atoms. Hydrogen atoms as well as the random disorder of the butyl chains are omitted for clarity.

Crystallographic information of Yb₉ and Lu₉ clusters

Table S1 Crystallographic information of Yb₉ and Lu₉ clusters.

	Yb ₉ cluster	Lu ₉ cluster
Chemical formula	C ₁₇₆ H ₂₀₈ O ₅₈ Yb ₉	C ₁₇₆ H ₂₀₈ O ₅₈ Lu ₉
Formula weight	4808.90	4826.24
Crystal system	Tetragonal	Tetragonal
Space group	P4 ₂ /n (#86)	P4 ₂ /n (#86)
<i>a</i> / Å	23.5449(3)	23.857(3)
<i>b</i> / Å	23.5449(3)	23.857(3)
<i>c</i> / Å	36.1157(7)	36.2570(10)
<i>α</i> / deg	90	90
<i>β</i> / deg	90	90
<i>γ</i> / deg	90	90
<i>V</i> / Å ³	20021.2(5)	20636(4)
<i>Z</i>	4	4
<i>D</i> _{calcd} / g cm ⁻³	1.595	1.553
<i>T</i> / K	93.15	173.15
<i>μ</i> (MoK _α) / cm ⁻¹	42.345	43.357
Max 2θ / deg	56.6	50.7
No. of measured reflections	74859	120501
No. of unique reflections	22456	18839
<i>R</i> ^a	0.0696	0.1265
<i>wR</i> ₂ ^b	0.1726	0.2115

^a $R = \Sigma ||F_0| - |F_c|| / \Sigma |F_0|$

^b $wR_2 = [\Sigma w(F_0^2 - F_c^2)^2 / \Sigma w(F_0^2)^2]^{1/2}$

Continuous Shape Measure

Continuous shape measure (CShM) calculates the deviation of the vertices of an actual structure to the vertices of a specified ideal structure. The CShM value S_{CShM} is given by the following equation:[1]

$$S_{\text{CShM}} = \min \frac{\sum_k^N |\mathbf{Q}_k - \mathbf{P}_k|^2}{\sum_k^N |\mathbf{Q}_k - \mathbf{Q}_0|^2} \times 100 \quad (\text{S1})$$

where $\mathbf{Q}_k$ is the vertices of an actual structure, $\mathbf{Q}_0$ is the center of mass of an actual structure, $\mathbf{P}_k$ is the vertices of an ideal structure, and N is the number of vertices. CShM calculation takes into account the deviation of the metal atom from the center of mass. Small S_{CShM} means that the actual structure is close to the ideal structure that the CShM calculated for.

Powder XRD

Fig. S2 Powder XRD of the clusters.

Low Temperature Emission Spectra

Fig. S3 Emission spectra of Gd₉, Yb₉, and Lu₉ clusters in 1.0×10^{-4} M methanol solution (EX: 380 nm) at 180 K. Raman peak is observed for Yb₉ cluster at around 440 nm.

Emission Intensity and Oxygen Purging

a)

b)

Fig. S4 Plot of emission intensity of Fig.3 for a) fluorescence from the ligands, b) emission from Yb(III) ions. Filled red circles: before oxygen purge, open blue circles: after oxygen purge.

Absorption Spectra

Fig. S5 Absorption spectra of $\text{Yb}_n\text{Gd}_{9-n}$ / $\text{Yb}_n\text{Lu}_{9-n}$ clusters in 1.0×10^{-4} M methanol solution.

Fig. S6 a) FAB-MS of Yb_1Gd_8 , Yb_3Gd_6 , Yb_7Gd_2 . b) ESI-MS of Yb_1Lu_8 , Yb_3Lu_6 , Yb_7Lu_2 .
