Supplemental Figure 1:

Supplemental Fig. 1: The patients' clinical history until blood collection
Patient timelines post-LT until blood collection are shown. The abscissa indicates the years after LT for each recipient. Gray lines on the right edge of each bar indicate the timing of blood sampling for this study. The timings of weaning IS (pink lines), off IS (red lines), resumption of IS (blue lines) and rejection episodes (green dots) are displayed within each gray bar showing patient clinical history. In case # 4, the timings of VZV infection that caused the discontinuation of IS are also shown.
